## Artist Statement

The benefits that I have received from taking the art classes under Dr. McDonough are many; I've learned a lot about how to create art in a way that presents itself in my head, I've learned to go with the flow when I mess up, and I've learned how to use many forms of art, some I enjoy and will continue to use and others that I was grateful to have the experience in, but I would most likely not do again.

This piece was created using plexiglass, acrylic paint, and epoxy resin. This piece is double sided depicting the sun and the moon. The sun side uses bright and warm colors such as red, orange, and yellow while the moon side uses cool colors such as blue, white, and a cool red tone. The sides are connected by a singular eye in the "middle" of the piece.
