Williamsport Area High School, PA.

## Artist Statement

By taking the Photography & Digital Media course under Ms. Armstrong this year, I think I am developing a greater sense and understanding about photography and its components. I have gotten a whole new perspective of it, and how it is more than just pulling out my phone and taking a quick snapshot of something. I have learned many different principles, methods, and ways that will help improve my photography, such as playing around with light, color, perspectives, angles, and the camera itself. Overall, I feel like I am slowly improving, understanding, and becoming a better photographer.

This picture I took was inspired by a photo prompt that included taking a picture of something through something else that could manipulate the view of the camera lens. I thought it would be cool to showcase my dog and her personality in a unique way, such as getting a picture of her through a small tube. It was tough working with her, though I like how the end result turned out, and how she is shown through the unique camera view.
